Windows Notes

1. Installation with Server Core or Nano Server is not supported.
2. If you use a 64-bit system, always run the disconnected scanner scripts in the 64-bit command prompt.
3. Installation with Server Core option is not supported.
4. This operating system is no longer in service. Please refer to IBM's policy on unsupported operating systems: https://www.ibm.com/support/customercare/sas/f/handbook/policies.html#unsupported

Notes applying to hypervisors on AIX operating systems

1. Supported Virtual I/O Server (VIOS) version 2.2.3 or higher. Before you start installation of the the BigFix client, run oem_setup_env command to place the user into the OEM software installation and setup environment.

2. In rare cases when machine is live migrated using Live Partition Mobility technology ILMT/BFI may wrongly calculate PVU values (high watermarks). This is known limitation that will be mitigated in future releases.

Notes applying to hypervisors on Linux operating systems

1. In rare cases when machine is live migrated using Live Partition Mobility technology ILMT/BFI may wrongly calculate PVU values (high watermarks). This is known limitation that will be mitigated in future releases.

2. To collect capacity data, use the Run Capacity Scan on Virtualization Hosts task. Hardware-assisted Virtualization (HVM) and Paravirtualization (PV) are supported.

Databases Notes

1. To use DB2 as a database, BigFix Inventory must be installed on Linux. Use a DB2 instance with default settings. Other required database settings are configured by BigFix Inventory installer. Restriction: If you specify non-default DB2 settings, BigFix Inventory might not work properly.
2. To use SQL Server as a database, BigFix Inventory must be installed on Windows.
3. To use SQL Server as a database, BigFix Inventory must be installed on Windows. If you use SQL Server 2012, install cumulative update 5 for SQL Server 2012 SP2 to prevent possible corruption of the database
4. To use DB2 as a database, BigFix Inventory must be installed on Linux. Use a DB2 instance with default settings. Other required database settings are configured by BigFix Inventory installer. Restriction: If you specify non-default DB2 settings, BigFix Inventory might not work properly.DB2 Workgroup Server Edition is sufficient to work with BigFix Inventory regardless of the number of endpoints. You can use DB2 Enterprise Server Edition, or Advanced Enterprise Server Edition to have access to advanced features of DB2.

Glossary

Bitness	Compatibility of the product with the bit version support that is provided by an operating system. Different parts of a product might run on the same operating system but support different application bitness. For example, one part of the product might run only in 32-bit mode, whereas another might support 64-bit tolerate mode. **31:** The product or part of the product runs as a 31-bit application in a 31-bit operating environment. **32:** The product or part of the product runs as a 32-bit application in a 32-bit operating environment. **64-tolerate:** The product or part of the product runs as a 32-bit application in a 64-bit operating environment. **64-exploit:** The product or part of the product runs natively as a 64-bit application in a 64-bit operating environment.
Co-packaged	Additional products that are included in the product package.
Co-installed	Additional products that are included in the product package and installed when the product is installed.
Deployment unit	**Deployment Structure** identifies pieces of a product that can be independently deployed onto one or more machines in a distributed infrastructure. • The top level of the deployment structure consists of one or more deployment units. There are four possible deployment units that a product might support: Desktop, Server, Agent or client, Mobile. • Deployment units may be further divided into deployable **components** **Desktop** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on the user desktops. Examples of desktop deployment units include development tools, administrative tools, stand-alone business applications. **Server** deployment unit: Part of the deployment structure that can provide services to multiple clients, providing the server in a client-server architecture. Examples of server deployment units include application servers, management servers, database servers and server-based business applications. **Agent or client** deployment unit: Part of the deployment structure that allows remote connection between software. Examples of agent of client deployment

	units include agents in management system that are installed in the same tier as the managed resources, a remote application, or database clients that are installed with the software accessing the remote services. **Mobile** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on a mobile device. An example of a mobile deployment unit is a mobile application.
Hypervisor	A virtual machine in which a product can run on a guest operating system.
Limited operating system support	By default, the supported guest operating systems for a product and a hypervisor are the operating systems that are supported by both the product and the hypervisor. If a product restricts support to a subset of these operating systems, this restriction will be indicated by specifying that there is Limited Operating System Support.
Operating system minimum	The minimum operating system maintenance level that is required to run on the product.
Prerequisite minimum	The minimum maintenance level that is required for the prerequisite to work with the product.
Product minimum	The minimum maintenance level that is required for the product to run on the operating system, on an hypervisor, or work with a prerequisite product or supported software.
Supported software minimum	The minimum maintenance level that is required for the supported software to work with the product.
Long Term Support Release	A Long Term Support Release is a recommended product level for which support, including defect and security updates, will be provided over a specified period of time.
Continuous Delivery Product	A Continuous Delivery Product delivers new function to clients more frequently.
Continuous Delivery Product - Long Term Support Release	A Continuous Delivery Product delivers new function to clients more frequently. Since frequent releases may not be suitable for all client environments, Long Term Support Releases provide a package that will be supported for a longer period of time.
