Prerequisites

Supported software (No supported software specified for this product)

Hardware (No hardware specified for this product)

Packaging list (No packaging list specified for this product)

Glossary

Disclaimers

Included in this report

This report can be generated with filters applied to operating system platforms, components, and/or software capabilities. This section reflects how the report was filtered when it was generated.

Legend

- The information about this item is included in this report.
- The information about this item is not included in the report filter.

Platforms

- AIX
- HP
- IBM i
- Linux
- Mac OS
- Solaris
- Windows

Component list

Server

- BigFix Inventory Server

Agent or client

- BigFix Agent
- Disconnected scanner

Capabilities

Prerequisites

- Asset Management
- Databases
- Runtime Environment
- Web Browsers

Operating Systems

The Operating sytems section specifies the operating systems that BigFix Inventory 9.2.13 supports, organized by operating system family.

Operating system families

AIX HP IBM i Linux Mac OS Solaris Windows

Component support

- Full
- Partial
- None

AIX

Summary

Operating system	Operating system minimum	Hardware	Bitness	Components	Notes?
AIX 6.1	TL4	POWER System - Big Endian	64-Exploit		Yes
AIX 7.1	Base	POWER System - Big Endian	64-Exploit		Yes
AIX 7.2	Base	POWER System - Big Endian	64-Exploit		Yes

AIX 6.1 POWER System - Big Endian

Linux Notes

1. PowerVM - (To properly calculate PVU values, manually set the PVU per core rating to 70.) • DLPAR • LPAR • LPAR mobility (Live Partition Mobility) • Single Shared Processor Pool • Multiple Shared Processor Pools (powerpc-utils-1.3.0-3.el6.ppc64.rpm is required.) • Micro-Partitioning Processor Factory Deconfiguration (To properly calculate PVU values, manually set the PVU per core rating to 70.) Power Enterprise Pools (Supported for all IBM Power Systems that support this technology). Ensure that the libstdc++.so.6 library is installed on the target computer.

2. PowerVM - (To properly calculate PVU values, manually set the PVU per core rating to 70.) • DLPAR • LPAR • LPAR mobility (Live Partition Mobility) • Single Shared Processor Pool • Multiple Shared Processor Pools (powerpc-utils-1.3.1-2.ppc64 is required on Big Endian, powerpc-utils-1.3.1-2.ppc64le is required on Little Endian.) • Micro-Partitioning Processor Factory Deconfiguration (To properly calculate PVU values, manually set the PVU per core rating to 70.) Power Enterprise Pools (Supported for all IBM Power Systems that support this technology). PowerKVM (To collect capacity data, use the Run Capacity Scan on Virtualization Hosts task).

3. CPU pooling (Starting from z/VM® 6.3, PTF for APAR VM65418 must be applied. Minimum scanner version: 2.7.0.2043). z/VM LPAR LPAR Group Capping (Starting from z/VM 6.3, PTF for APAR VM65419, and UM34746 for APAR VM65716 must be applied on the z/VM host) z/KVM (Kernel 4.8 or higher is required.)

4. CPU pooling (Starting from z/VM® 6.3, PTF for APAR VM65418 must be applied. Minimum scanner version: 2.7.0.2043). z/VM LPAR LPAR Group Capping (Starting from z/VM 6.3, PTF for APAR VM65419, and UM34746 for APAR VM65716 must be applied on the z/VM host) Docker Containers (To discover software that is installed in Docker containers, ensure that the all requirements are met.) • 1.11 Ensure that the libstdc ++.so.6 library is installed on the target computer.

5. PowerVM - (To properly calculate PVU values, manually set the PVU per core rating to 70.) • DLPAR • LPAR • LPAR mobility (Live Partition Mobility) • Single Shared Processor Pool • Multiple Shared Processor Pools (powerpc-utils-1.3.1-2.ppc64 is required on Big Endian, powerpc-utils-1.3.1-2.ppc64le is required on Little Endian.) • Micro-Partitioning Processor Factory Deconfiguration (To properly calculate PVU values, manually set the PVU per core rating to 70.) Power Enterprise Pools (Supported for all IBM Power Systems that support this technology). PowerKVM (To collect capacity data, use the Run Capacity Scan on Virtualization Hosts task). Ensure that the libstdc++.so.6 library is installed on the target computer.

6. Ensure that the libstdc++.so.6 library is installed on the target computer.

7. PowerVM - (To properly calculate PVU values, manually set the PVU per core rating to 70.) • DLPAR • LPAR • LPAR mobility (Live Partition Mobility) • Single Shared Processor Pool • Multiple Shared Processor Pools (powerpc-utils-1.3.0-3.el6.ppc64.rpm is required.) • Micro-Partitioning Processor Factory Deconfiguration (To properly calculate PVU values, manually set the PVU per core rating to 70.) Power Enterprise Pools (Supported for all IBM Power Systems that support this technology).

8. Red Hat Compatible Kernel (RHCK) and Unbreakable Enterprise Kernel (UEK) Release 3

9. CPU pooling (Starting from z/VM® 6.3, PTF for APAR VM65418 must be applied. Minimum scanner version: 2.7.0.2043). z/VM LPAR LPAR Group Capping (Starting from z/VM 6.3, PTF for APAR VM65419, and

UM34746 for APAR VM65716 must be applied on the z/VM host) Ensure that the libstdc++.so.6 library is installed on the target computer.

10. PowerVM - (To properly calculate PVU values, manually set the PVU per core rating to 70.) • DLPAR • LPAR • LPAR mobility (Live Partition Mobility) • Single Shared Processor Pool • Multiple Shared Processor Pools (powerpc-utils-1.3.0-3.el6.ppc64.rpm is required.) • Micro-Partitioning Processor Factory Deconfiguration (To properly calculate PVU values, manually set the PVU per core rating to 70.) Power Enterprise Pools (Supported for all IBM Power Systems that support this technology). PowerKVM (To collect capacity data, use the Run Capacity Scan on Virtualization Hosts task). Ensure that the libstdc++.so.6 library is installed on the target computer.

11. CPU pooling (Starting from z/VM® 6.3, PTF for APAR VM65418 must be applied. Minimum scanner version: 2.7.0.2043). z/VM LPAR LPAR Group Capping (Starting from z/VM 6.3, PTF for APAR VM65419, and UM34746 for APAR VM65716 must be applied on the z/VM host) Docker Containers (To discover software that is installed in Docker containers, ensure that the all requirements are met.) • 1.11

12. CPU pooling (Starting from z/VM® 6.3, PTF for APAR VM65418 must be applied. Minimum scanner version: 2.7.0.2043). z/VM LPAR LPAR Group Capping (Starting from z/VM 6.3, PTF for APAR VM65419, and UM34746 for APAR VM65716 must be applied on the z/VM host)

13. PowerVM - (To properly calculate PVU values, manually set the PVU per core rating to 70.) • DLPAR • LPAR • LPAR mobility (Live Partition Mobility) • Single Shared Processor Pool • Multiple Shared Processor Pools (powerpc-utils-1.3.0-3.el6.ppc64.rpm is required.) • Micro-Partitioning Processor Factory Deconfiguration (To properly calculate PVU values, manually set the PVU per core rating to 70.) Power Enterprise Pools (Supported for all IBM Power Systems that support this technology). PowerKVM (To collect capacity data, use the Run Capacity Scan on Virtualization Hosts task).

Windows Notes

1. Installation with Server Core or Nano Server is not supported.
2. If you use a 64-bit system, always run the disconnected scanner scripts in the 64-bit command prompt.
3. Installation with Server Core option is not supported.
4. This operating system is no longer in service. Please refer to IBM's policy on unsupported operating systems: https://www.ibm.com/support/customercare/sas/f/handbook/policies.html#unsupported

Hypervisors

The Hypervisors section specifies the hypervisors that BigFix Inventory 9.2.13 support.

Component support

- Full
- Partial
- None

Components	Supported operating systems
All components that this hypervisor supports **Agent or client** • BigFix Agent • Disconnected scanner	• AIX 7.1 POWER System - Big Endian • AIX 7.1 TL4 POWER System - Big Endian • AIX 7.2 POWER System - Big Endian • AIX 7.2 TL2 POWER System - Big Endian

Notes applying to hypervisors on AIX operating systems

1. Supported Virtual I/O Server (VIOS) version 2.2.3 or higher. Before you start installation of the the BigFix client, run oem_setup_env command to place the user into the OEM software installation and setup environment.

2. In rare cases when machine is live migrated using Live Partition Mobility technology ILMT/BFI may wrongly calculate PVU values (high watermarks). This is known limitation that will be mitigated in future releases.

HP

Summary

Notes applying to hypervisors on Linux operating systems

1. In rare cases when machine is live migrated using Live Partition Mobility technology ILMT/BFI may wrongly calculate PVU values (high watermarks). This is known limitation that will be mitigated in future releases.
2. To collect capacity data, use the Run Capacity Scan on Virtualization Hosts task. Hardware-assisted Virtualization (HVM) and Paravirtualization (PV) are supported.

Solaris

Summary

Notes applying to hypervisors on Windows operating systems

1. To collect capacity data, use the Run Capacity Scan on Virtualization Hosts task. Hardware-assisted Virtualization (HVM) and Paravirtualization (PV) are supported.

Prerequisites

The Prerequisites section specifies the capabilities that BigFix Inventory 9.2.13 requires, and the prerequisite products that can be used to fulfill those capabilities.

Component Support

Glossary

Bitness	Compatibility of the product with the bit version support that is provided by an operating system. Different parts of a product might run on the same operating system but support different application bitness. For example, one part of the product might run only in 32-bit mode, whereas another might support 64-bit tolerate mode. **31:** The product or part of the product runs as a 31-bit application in a 31-bit operating environment. **32:** The product or part of the product runs as a 32-bit application in a 32-bit operating environment. **64-tolerate:** The product or part of the product runs as a 32-bit application in a 64-bit operating environment. **64-exploit:** The product or part of the product runs natively as a 64-bit application in a 64-bit operating environment.
Co-packaged	Additional products that are included in the product package.
Co-installed	Additional products that are included in the product package and installed when the product is installed.
Deployment unit	**Deployment Structure** identifies pieces of a product that can be independently deployed onto one or more machines in a distributed infrastructure. • The top level of the deployment structure consists of one or more deployment units. There are four possible deployment units that a product might support: Desktop, Server, Agent or client, Mobile. • Deployment units may be further divided into deployable **components** **Desktop** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on the user desktops. Examples of desktop deployment units include development tools, administrative tools, stand-alone business applications. **Server** deployment unit: Part of the deployment structure that can provide services to multiple clients, providing the server in a client-server architecture. Examples of server deployment units include application servers, management servers, database servers and server-based business applications. **Agent or client** deployment unit: Part of the deployment structure that allows remote connection between software. Examples of agent of client deployment

	units include agents in management system that are installed in the same tier as the managed resources, a remote application, or database clients that are installed with the software accessing the remote services. **Mobile** deployment unit: Part of the deployment structure intended for use by a single user, typically installed on a mobile device. An example of a mobile deployment unit is a mobile application.
Hypervisor	A virtual machine in which a product can run on a guest operating system.
Limited operating system support	By default, the supported guest operating systems for a product and a hypervisor are the operating systems that are supported by both the product and the hypervisor. If a product restricts support to a subset of these operating systems, this restriction will be indicated by specifying that there is Limited Operating System Support.
Operating system minimum	The minimum operating system maintenance level that is required to run on the product.
Prerequisite minimum	The minimum maintenance level that is required for the prerequisite to work with the product.
Product minimum	The minimum maintenance level that is required for the product to run on the operating system, on an hypervisor, or work with a prerequisite product or supported software.
Supported software minimum	The minimum maintenance level that is required for the supported software to work with the product.
Long Term Support Release	A Long Term Support Release is a recommended product level for which support, including defect and security updates, will be provided over a specified period of time.
Continuous Delivery Product	A Continuous Delivery Product delivers new function to clients more frequently.
Continuous Delivery Product - Long Term Support Release	A Continuous Delivery Product delivers new function to clients more frequently. Since frequent releases may not be suitable for all client environments, Long Term Support Releases provide a package that will be supported for a longer period of time.
